

Reflective Notes

This project albeit super hectic, taught me a lot. Getting my hands dirty and diving straight into the project was a welcome change of pace from the rigorous planning I usually follow.

Shubhangini

While I do believe that the execution of our project could have been improved upon massively with the addition of just a little more time to interact and iterate with our teams; I must concede that I also enjoyed the trial-and-error form of problem-solving that this time-restricted project forced us to adopt quite a fair bit.

Kanishk

I found the learning curve of this course and project extremely steep, with information that almost seemed too boundless to absorb. I enjoyed the live coding aspect, especially when things worked seamlessly. Having no background in music whatsoever, it often felt like I was trying to create something entirely new every time I sat down at my keyboard. Despite it being an uphill battle on most days, I'm truly grateful for the challenge this project presented to me.

Saudharam

The entire process of planning and executing this project was almost frantic, as we darted about trying to finish everything in time. But the chaos resulted in us (surprisingly) having fun at the same time. I felt myself learning so much more by attempting to write the code unassisted for once. Our teamwork and effective splitting of workload allowed us to effectively achieve our goals in time.

Arushi

I found the experience wholly humbling as I had previously believed that I had successfully grasped the majority of concepts that had been introduced to us. Imagine my surprise when nothing I did worked and I had no idea where I was even going wrong. If not for my team and the notes that had been shared with us previously, I wholeheartedly think I wouldn't have been able to get the outputs that I finally managed to in the end. The experience itself was extremely funny and exciting. Modulating the sounds of everyday things like keyboards to sound haunting and whale-like was exactly the kind of whacky thing I had been itching to do for a while.

Siddharth

I have learned a lot from this class, not just about coding but also about working with a team. It's crucial to understand the basics of coding before diving into this field. I'm very thankful to Mr. Ranjith for his help with the project and for answering our questions.

Rahul
